3.5 Flags

4. Bands

5. Every metric, option by option

5.1 Physical well-being — 8 indicators

5.2 Financial well-being — 9 indicators

5.3 Emotional well-being — 6 indicators

5.4 Social well-being — 7 indicators

5.5 Environmental well-being — 6 indicators

5.6 Intellectual well-being — 6 indicators

5.7 Spiritual well-being — 7 indicators

6. Worked example — one real household

6.1 Physical, indicator by indicator

6.2 The other six dimensions

6.3 The household index

6.4 From households to a village

7. How this compares with the original 1 / 0.5 / 0 model

7.1 The same household, both ways

7.2 Across all 672 demo households

8. Thresholds and where they come from

8.1 Two deliberate scoring choices

8.2 What is deliberately not scored

Appendix — complete option-to-value reference

1. What this document is

This is the complete calculation reference for the DYESKIT well-being score: every metric, every answer option and the weight it carries, and every formula used to turn answers into a village index.

It is generated directly from the application code (server/questionnaire.js and server/scoring.js). If a scoring rule changes, this document is regenerated from the same source, so the two can never disagree. Regenerate with: node tools/build-scoring-doc.js

Questionnaire v2.0 · Scoring score-v2.0 · Generated 24 September 2026

2. The calculation chain

Five steps take a household interview to a village score. Nothing is multiplied at any stage.

ANSWER	one option chosen, or a measurement taken
	each option carries a value between 0 and 1
v	
INDICATOR	49 of them; some read one question, some combine two
	dimension = mean of its indicator scores
v	
DIMENSION	7 of them (Physical, Financial, Emotional, Social, Environmental, Intellectual, Spiritual)
v	
HOUSEHOLD INDEX	IWB = mean of the 7 dimension scores, each weighted 1/7
	shown as a percentage and mapped to a 1–7 band
v	
VILLAGE INDEX	VWBI = mean of valid household indexes in that village

2.1 The formulas

dimension_score	= sum(valid indicator scores) / count(valid indicators)
IWB	= sum(valid dimension scores) / count(valid dimensions)
percentage	= IWB * 100
band	= the 1–7 band the percentage falls into (see section 4)
VWBI	= sum(valid household IWB) / count(valid households)

Why averaging and never multiplying: a household with a stable income but no savings should not score zero on Financial. Multiplication would do exactly that. The average reports 0.5 — materially resilient, without a buffer — which is the truthful answer.

3. Rules that apply to every metric

3.1 The 0–1 scale

Every indicator produces a value between 0 and 1, where 1 is the healthiest state the question can describe and 0 the least healthy. Nothing is scored on its own scale, so dimensions stay comparable.

3.2 Likert questions (1–5 agreement)

```
normal item:  score = (answer - 1) / 4
reverse item:  score = (5 - answer) / 4
```

```
answer 1 -> 0.00    2 -> 0.25    3 -> 0.50    4 -> 0.75    5 -> 1.00
```

Reverse items are those where agreeing is the bad outcome — winter isolation (C6) and, in ordinal form, cultural continuity (H7), climate shock (F7) and education barriers (G5).

3.3 Missing answers

Situation	Code	Treatment
Question not collected — no kit, skipped, or not applicable	NC / NA	Excluded. The denominator shrinks; it is never scored as zero.
"Don't know"	DK	Scored 0.5, a conservative neutral.
"Prefer not to answer"	PNA / RF	Scored 0.5, a conservative neutral.

The distinction matters. Treating a missing BMI as zero would punish a village for the enumerator lacking a weighing scale. Treating a refusal as missing would quietly let households opt out of the parts of the score they dislike.

3.4 Validity floors

- A dimension is reported only if at least half its indicators (minimum 2) carry real data.
- A household index is reported only if at least 5 of the 7 dimensions are valid.
- A village index is reported only once surveys reach 30% of its households or 10 households, whichever is larger.
- Below any of these, the system shows "insufficient data" rather than a number.

3.5 Flags

Any dimension averaging below 43% is flagged. That line is the bottom of band 4, "Basic Well-Being Achieved" — below it, the minimum standard has not been met. Below 29% (band 3 and under) the flag is raised to critical.

4. Bands

The percentage is mapped to the seven-point scale the project already uses.

Percentage	Band	Meaning
0–15%	1	Foundational Support Needed
15–29%	2	Emerging Well-Being
29–43%	3	Developing Well-Being
43–57%	4	Basic Well-Being Achieved
57–71%	5	Advancing Well-Being
71–85%	6	Strong Well-Being
85–100%	7	Thriving Well-Being

5. Every metric, option by option

Each dimension below lists its indicators, the questions they read, and the exact value each answer option carries. Where an indicator is computed rather than looked up, the formula is shown.

5.1 Physical well-being — 8 indicators

Each indicator carries an equal share of this dimension: $1 / 8 = 12.5\%$ of the dimension, and $1 / 56 = 1.79\%$ of the whole index.

Nutritional status (BMI) (B1)

B1 — Measured height & weight

Measured height and weight are converted to BMI, then banded on ICMR / WHO Asia-Pacific cut-offs (not the Western bands).

```
BMI = weight_kg / (height_m ** 2)
```

```
18.5 – 22.9  -> 1.0    (healthy)
```

```
23.0 – 24.9  -> 0.7
```

```
17.0 – 18.4  -> 0.6
```

```
25.0 – 29.9  -> 0.4
```

```
16.0 – 16.9  -> 0.3
```

```
anything else -> 0.0
```

```
height or weight missing -> NC (excluded, not zero)
```

Chronic illness (B2)

B2 — Diagnosed chronic illness?

Answer option	Value
None	1
Managed with medication	0.5
Unmanaged or severe	0
Don't know	0.5 (neutral)

Altitude symptoms (B3)

B3 — Altitude symptoms (breathlessness, chronic headache, fatigue)?

Answer option	Value
Never	1
Occasionally	0.5
Frequently	0

Healthcare access (B4, B5)

B4 — Nearest health facility you'd use

Answer option	Value
In village	1
Mobile camp	1
1–10 km	0.75
11–20 km	0.5
More than 20 km	0

B5 — Last year, unable to reach care due to snow, road or distance?

Answer option	Value
Never	1
Once	0.5
More than once	0

Two questions describe one thing — can this household reach care? The indicator is their mean, so distance and winter cut-off each carry half.

```
healthcare = mean( B4 distance score , B5 winter cut-off score )
```

Physical activity (B6)

B6 — Typical daily physical activity

Answer option	Value
Active work (farming, herding, labour)	1
Moderate	0.5
Sedentary	0

Sleep (B7)

B7 — Adequate sleep (about 7 hours) most nights?

Answer option	Value
Always	1
Mostly	0.67
Rarely	0.33
Never	0

Sanitation (B8)

B8 — Household toilet

Answer option	Value
Toilet + proper waste disposal	1
Traditional dry-compost toilet	1

Answer option	Value
Toilet without proper disposal	0.5
No toilet	0

Self-rated health (B11)

B11 — I am satisfied with my physical health.

Likert 1–5: (answer – 1) ÷ 4.

5.2 Financial well-being — 9 indicators

Each indicator carries an equal share of this dimension: $1 / 9 = 11.1\%$ of the dimension, and $1 / 63 = 1.59\%$ of the whole index.

Income level (F1)

F1 — Yearly household income (all sources)

Answer option	Value
Below ₹1 lakh	0
₹1–3 lakh	0.33
₹3–5 lakh	0.67
₹5–10 lakh	0.85
Above ₹10 lakh	1
Prefer not to answer	0.5 (neutral)

Income sufficiency (F2)

F2 — Does income cover needs through the year?

Answer option	Value
Covers + surplus	1
Covers basics only	0.5
Does not cover	0

Savings / assets (F3)

F3 — Savings or assets to fall back on?

Answer option	Value
Savings / land / livestock / SHG	1
Limited	0.5
None or in debt	0

Livelihood diversity (F4)

F4 — Number of separate income sources

Number of separate income sources (F4), entered as a number.

3 or more -> 1.0 2 -> 0.67 1 -> 0.33 0 -> 0.0

Income spread over year (F6)

F6 — In which months is most income earned?

Answer option	Value
---------------	-------

Whether income arrives all year or is bunched into the tourist months — a Ladakh-specific vulnerability.

even year-round -> 1.0
3+ quarters -> 0.75
2 quarters -> 0.5
1 quarter -> 0.25

Climate shock (reverse) (F7)

F7 — Extreme-weather damage to crops, livestock or property in last 5 years?

Answer option	Value
No	1
Once	0.5
More than once	0

Felt financial security (F8)

F8 — I feel financially secure about my household's future.

Likert 1–5: (answer – 1) ÷ 4.

Government scheme use (F9)

F9 — Aware of / using a government livelihood scheme?

Answer option	Value
Aware & using	1
Aware, not using	0.5
Not aware	0

Bank account (F10)

F10 — Household has a bank account?

Answer option	Value
Yes	1
No	0

5.3 Emotional well-being — 6 indicators

Each indicator carries an equal share of this dimension: $1 / 6 = 16.7\%$ of the dimension, and $1 / 42 = 2.38\%$ of the whole index.

Emotional state (C1)

C1 — Overall, how do you feel emotionally?

Answer option	Value
Fit (calm, focused)	1
Generally stable	0.5
Facing challenges	0
Prefer not to answer	0.5 (neutral)

Support system (C2)

C2 — What emotional support can you turn to?

Answer option	Value
Prefer not to answer	0.5 (neutral)

Counts the distinct kinds of support named (family, religious community, professional, personal coping). "None" and refusals are not counted.

3 or more → 1.0 2 → 0.75 1 → 0.5 0 → 0.0

Stress recovery (C3)

C3 — How do you recover from stress?

Answer option	Value
Low stress, quick recovery	1
Moderate	0.5
High, difficult	0
Prefer not to answer	0.5 (neutral)

Hope (C4)

C4 — In the last month I have felt hopeful about the future.

Likert 1–5: $(\text{answer} - 1) \div 4$.

Life satisfaction (C5)

C5 — Overall life satisfaction

Likert 1–5: $(\text{answer} - 1) \div 4$.

Winter isolation (reverse) (C6)

C6 — I feel isolated or cut off during winter months.

Likert 1–5, reverse scored: $(5 - \text{answer}) \div 4$.

5.4 Social well-being — 7 indicators

Each indicator carries an equal share of this dimension: $1 / 7 = 14.3\%$ of the dimension, and $1 / 49 = 2.04\%$ of the whole index.

Community participation (D1)

D1 — Participation in community activities (festivals, meetings, collective labour)

Answer option	Value
Regular	1
Occasional	0.5
None	0

Trust (D2)

D2 — I trust the people in my village.

Likert 1–5: $(\text{answer} - 1) \div 4$.

Conflict level (D3)

D3 — Level of conflict or tension in the village

Answer option	Value
High trust, low conflict	1
Moderate	0.5
Frequent conflict	0

Gender & social inclusion (D4)

D4 — Do women and marginalized groups take part equally in decisions?

Answer option	Value
Equal	1
Partial	0.5
Exclusion	0

Intergenerational bond (D5)

D5 — Elders are respected and youth are engaged in village life.

Likert 1–5: $(\text{answer} - 1) \div 4$.

Village institutions (D6)

D6 — A village institution you can turn to?

Answer option	Value
---------------	-------

Counts the functioning village institutions named.

2 or more -> 1.0 1 -> 0.5 none -> 0.0

Emergency support (D7)

D7 — My community would help my household in an emergency.

Likert 1–5: (answer – 1) ÷ 4.

5.5 Environmental well-being — 6 indicators

Each indicator carries an equal share of this dimension: $1 / 6 = 16.7\%$ of the dimension, and $1 / 42 = 2.38\%$ of the whole index.

Drinking water quality (B10)

B10 — Drinking water quality

Answer option	Value
Safe as-is	1
Needs boiling / filtration	0.5
Occasionally contaminated	0.25
Unsafe	0
Don't know	0.5 (neutral)

Water reliability (E1, E1a)

E1 — Water supply reliable through the year?

Answer option	Value
Reliable	1
Scarce some months	null
Severe shortage or contamination	0

E1a — If scarce, how many months?

Scarcity is scored by how much of the year it lasts, instead of a single "seasonal" step.

reliable -> 1.0
scarce, m months -> $\max(0, 1 - m / 12)$
severe / contaminated -> 0.0
scarce but months unknown -> 0.5

Local food (E3)

E3 — Local or own-grown vs packaged food

Answer option	Value
Mostly local	1
Mixed	0.5
Mostly packaged	0

Waste practice (E4)

E4 — Household waste practice

Answer option	Value
Segregated + disposed	1
Partly managed	0.5
Burned	0.25
Open dumping	0

Cooking / heating fuel (E5)

E5 — Main cooking & heating fuel(s)

Answer option	Value
Solar	1
Electricity	1
Biogas	1
LPG	0.75
Firewood	0.33
Dung cakes	0
Kerosene	0

Households usually name more than one fuel, so the indicator is the mean of the fuels selected. Each fuel carries its own value (solar, electricity, biogas = 1.0; LPG = 0.75; firewood = 0.33; dung and kerosene = 0).

```
fuel = mean( score of each fuel selected )
```

```
example: LPG (0.75) + solar (1.0) -> 0.875
```

Climate adaptation (E6)

E6 — Climate / water adaptation measures adopted?

Answer option	Value
---------------	-------

Counts adaptation measures adopted (water storage, ice stupa, greenhouse or trombe wall, passive-solar retrofit, insulation, rainwater or snowmelt harvesting).

```
2 or more -> 1.0    1 -> 0.5    none -> 0.0
```

5.6 Intellectual well-being — 6 indicators

Each indicator carries an equal share of this dimension: $1 / 6 = 16.7\%$ of the dimension, and $1 / 42 = 2.38\%$ of the whole index.

Education attained (A13)

A13 — Highest education in household

Answer option	Value
No formal education	0
Primary	0.25
Secondary	0.5
Higher secondary	0.75
Diploma	0.75
Bachelor's	1
Master's	1
Doctorate	1
Monastic	0.5
Vocational	0.5
Other	0.5

Active learning (G1)

G1 — Anyone currently learning a new skill or subject?

Answer option	Value
Actively	1
Occasionally	0.5
Not at all	0

Digital literacy (G2)

G2 — Can you find & judge information using phone, computer or internet?

Answer option	Value
Confidently	1
With some difficulty	0.5
No	0

Civic awareness (G3)

G3 — Aware of basic civic rights & entitlements?

Answer option	Value
Well aware	1
Partly	0.5
Not aware	0

Climate awareness (G4)

G4 — Aware of climate change and its impact on Ladakh?

Answer option	Value
Well aware	1
Partly	0.5
Not aware	0

Education barriers (reverse) (G5)

G5 — Barriers to education in your household?

Answer option	Value
---------------	-------

A reverse indicator: more barriers means a lower score.

no barriers -> 1.0 1 -> 0.67 2 -> 0.33 3 or more -> 0.0

5.7 Spiritual well-being — 7 indicators

Each indicator carries an equal share of this dimension: $1 / 7 = 14.3\%$ of the dimension, and $1 / 49 = 2.04\%$ of the whole index.

Spiritual practice (H1)

H1 — How regularly do you pray, meditate or do religious practice?

Answer option	Value
Daily	1
Weekly	0.67
Occasionally	0.33
Never	0

Sense of purpose (H2)

H2 — I have a clear sense of purpose and direction.

Likert 1–5: $(\text{answer} - 1) \div 4$.

Ethical living (H3)

H3 — My decisions are guided by ethical or spiritual values.

Likert 1–5: $(\text{answer} - 1) \div 4$.

Inner peace (H4)

H4 — I generally feel inner peace and contentment.

Likert 1–5: $(\text{answer} - 1) \div 4$.

Access to worship (H5)

H5 — Can you reach a monastery, mosque or place of worship when you wish?

Answer option	Value
In village	1
Within 10 km	0.67
Beyond 10 km	0.33
Seasonal only	0

Festival participation (H6)

H6 — Festival / cultural participation

Answer option	Value
Regular	1
Occasional	0.5
Never	0

Cultural continuity (reverse) (H7)

H7 — Are younger people losing interest in Ladakhi language, festivals and practices?

Answer option	Value
Strongly agree	0
Agree	0.25
Neutral	0.5
Disagree	0.75
Strongly disagree	1

6. Worked example — one real household

Household L01-H0003, Nimmoo village, Leh district — a real record from the demo database, scored live while this document was generated.

6.1 Physical, indicator by indicator

Indicator	Their answer	Value
Nutritional status (BMI)	height cm: 151, weight kg: 48	1
Chronic illness	Managed with medication	0.5
Altitude symptoms	Occasionally	0.5
Healthcare access	1–10 km / Once	0.625
Physical activity	Sedentary	0
Sleep	Mostly	0.67
Sanitation	Toilet + proper waste disposal	1
Self-rated health	3 of 5	0.5

```
sum    = 1.0 + 0.5 + 0.5 + 0.625 + 0.0 + 0.67 + 1.0 + 0.5 = 4.795
score  = 4.795 / 8 indicators                             = 0.599
as a percentage                                     = 59.9%
```

Note what the average does: this household is sedentary (0.0) and still lands mid-band, because good nutrition, a proper toilet and adequate sleep carry it. No single weak answer can sink the dimension.

BMI in full: $48 \div (1.51 \text{ m})^2 = 48 \div 2.2801 = 21.1$, which sits inside 18.5–22.9, so the indicator scores 1.0. Under Western cut-offs the healthy band would run to 24.9; the Asia-Pacific band is used because diabetes and heart-disease risk begin at a lower BMI in South Asian populations.

Healthcare access in full: the facility is 1–10 km away (0.75) and the household was cut off once last winter (0.5). The indicator is their mean, 0.625.

6.2 The other six dimensions

Dimension	Indicators used	Score	As %
Physical	8 of 8	0.599	59.9%
Financial	9 of 9	0.908	90.8%
Emotional	6 of 6	0.792	79.2%
Social	7 of 7	0.643	64.3%
Environmental	6 of 6	0.896	89.6%
Intellectual	6 of 6	0.612	61.2%
Spiritual	7 of 7	0.703	70.3%

6.3 The household index

```
IWB = (0.599 + 0.908 + 0.792 + 0.643 + 0.896 + 0.612 + 0.703) / 7  
      = 0.736  
      = 73.6%  
      -> Band 6, "Strong Well-Being"
```

Every dimension counts the same 1/7, whatever number of indicators sits underneath it. A dimension built from 9 indicators (Financial) does not outweigh one built from 6 (Environmental).

6.4 From households to a village

The village index is the mean of its valid household indexes — households are not weighted by size, because the questionnaire measures the respondent and their household conditions, not each person separately.

```
Stok, Leh district:  
82 households surveyed of 210 on record    = 39.0% coverage  
minimum required: max(30% of 210, 10)      = 63    -> sufficient  
VWBI = mean of the 82 household indexes    = 0.734 = 73.4%  
-> Band 6, "Strong Well-Being"
```

7. How this compares with the original 1 / 0.5 / 0 model

The project proposal scored 28 indicators (4 per dimension) on a three-step scale: 1 for adequacy, 0.5 for partial adequacy, 0 for none. That scale is still documented in the proposal, so the difference matters.

7.1 The same household, both ways

Old indicator (4 only)	This household	Old value	New model
Nutritional BMI	21.1, healthy	1.0	1.0
Chronic or high-altitude illness	managed + occasional symptoms	0.5	0.5 and 0.5, kept separate
Access to healthcare	1–10 km, cut off once	0.5	0.625 (distance graded, winter counted)
Physical activity	sedentary	0.0	0.0
Sleep	mostly adequate	not asked	0.67
Sanitation	toilet with proper disposal	not asked	1.0
Self-rated health	3 of 5	not asked	0.5

OLD: $(1.0 + 0.5 + 0.5 + 0.0) / 4 = 0.500 = 50.0\% \rightarrow$ Band 4, "Basic"
NEW: $0.599 = 59.9\% \rightarrow$ Band 5, "Advancing"

7.2 Across all 672 demo households

Measure	Old 1 / 0.5 / 0	New 0–1
Mean Physical score	61.1%	58.6%
Standard deviation	12.1	10.4
Distinct score values possible	12	157
Households landing in a different band	—	360 of 672 (54%)
Of those, new score higher / lower	—	93 higher · 267 lower

- Resolution improves sharply: 12 possible values becomes 157, so households stop sharing identical scores.
- Spread narrows slightly, because averaging 8 indicators smooths more than averaging 4. The gain is finer resolution, not a wider range.
- The new model is usually stricter, not softer: where bands differ it scores lower about three times in four, because it asks about things the old model ignored.
- More than half of households change band. This is a decision to take deliberately before fieldwork, not a rounding difference.

8. Thresholds and where they come from

Metric	Anchor	Replaces
BMI bands	ICMR / WHO Asia-Pacific (healthy 18.5–22.9)	Western 18.5–24.9
Healthcare distance	IPHS norms for hill and tribal areas	"1 clinic per 2,000 people"
Drinking water quality	BIS IS 10500 potable standard	generic "potable"
Income bands	₹ brackets set to Ladakh living costs	Malaysian ringgit bands
Government schemes	MGNREGA, PM-KISAN, PMAY, livestock insurance	Malaysian schemes
Minimum village sample	30% of households or 10, whichever is larger	unchanged from the platform documents

8.1 Two deliberate scoring choices

- A traditional dry-compost toilet scores the full 1.0, the same as a modern flush toilet. It is a water-saving technology suited to a cold desert, not a deficiency.
- Monastic and vocational education score 0.5, not 0. Non-formal education has genuine value, and monastic education is a respected pathway in Ladakh.

8.2 What is deliberately not scored

Item	Why
C7 substance use	Self-report under-counts heavily. Reported as a village prevalence flag only.
Section I (technology, AI, priorities)	Diagnostic. Reported separately so it cannot inflate or depress the well-being score.
A1–A12 demographics	Context and filters. Only A13 (education) is scored, inside Intellectual.
E2 glacier change, E7 tourist waste, D8 youth migration	Perception and context items that inform interpretation, not the index.

Appendix — complete option-to-value reference

Every scored question in one table, for checking against the field forms.

Dimension	Item	Question	Values
Physical	B1	Measured height & weight	numeric input, see rule
Physical	B2	Diagnosed chronic illness?	None = 1; Managed with medication = 0.5; Unmanaged or severe = 0; Don't know = 0.5
Physical	B3	Altitude symptoms (breathlessness, chronic headache, fatigue)?	Never = 1; Occasionally = 0.5; Frequently = 0
Physical	B4	Nearest health facility you'd use	In village = 1; Mobile camp = 1; 1–10 km = 0.75; 11–20 km = 0.5; More than 20 km = 0
Physical	B5	Last year, unable to reach care due to snow, road or distance?	Never = 1; Once = 0.5; More than once = 0
Physical	B6	Typical daily physical activity	Active work (farming, herding, labour) = 1; Moderate = 0.5; Sedentary = 0
Physical	B7	Adequate sleep (about 7 hours) most nights?	Always = 1; Mostly = 0.67; Rarely = 0.33; Never = 0
Physical	B8	Household toilet	Toilet + proper waste disposal = 1; Traditional dry-compost toilet = 1; Toilet without proper disposal = 0.5; No toilet = 0
Physical	B11	I am satisfied with my physical health.	Likert: 1→0.00, 5→1.00
Financial	F1	Yearly household income (all sources)	Below ₹1 lakh = 0; ₹1–3 lakh = 0.33; ₹3–5 lakh = 0.67; ₹5–10 lakh = 0.85; Above ₹10 lakh = 1; Prefer not to answer = 0.5
Financial	F2	Does income cover needs through the year?	Covers + surplus = 1; Covers basics only = 0.5; Does not cover = 0
Financial	F3	Savings or assets to fall back on?	Savings / land / livestock / SHG = 1; Limited = 0.5; None or in debt = 0
Financial	F4	Number of separate income sources	numeric input, see rule
Financial	F6	In which months is most income earned?	numeric input, see rule
Financial	F7	Extreme-weather damage to crops, livestock or property in last 5 years?	No = 1; Once = 0.5; More than once = 0
Financial	F8	I feel financially secure about my household's future.	Likert: 1→0.00, 5→1.00
Financial	F9	Aware of / using a government livelihood scheme?	Aware & using = 1; Aware, not using = 0.5; Not aware = 0
Financial	F10	Household has a bank account?	Yes = 1; No = 0

Dimension	Item	Question	Values
Emotional	C1	Overall, how do you feel emotionally?	Fit (calm, focused) = 1; Generally stable = 0.5; Facing challenges = 0; Prefer not to answer = 0.5
Emotional	C2	What emotional support can you turn to?	Prefer not to answer = 0.5
Emotional	C3	How do you recover from stress?	Low stress, quick recovery = 1; Moderate = 0.5; High, difficult = 0; Prefer not to answer = 0.5
Emotional	C4	In the last month I have felt hopeful about the future.	Likert: 1→0.00, 5→1.00
Emotional	C5	Overall life satisfaction	Likert: 1→0.00, 5→1.00
Emotional	C6	I feel isolated or cut off during winter months.	reverse Likert: 5→0.00, 1→1.00
